Index to The Oil and Gas Journal

Principal Articles Appearing in Issues During First Six Months of 1927 Classified for Ready Reference by Readers

ASSOCIATIONS AND BUREAUS

	Date	Page
Willson, C. O.—Plant Superintendents in Conference	1-20	41
Society of Automotive Engineers Detroit Meeting	2-3	30
A. I. M. E. Petroleum Division Meeting	2-17	35
A. I. M. E. Petroleum Division Meeting	2-24	30
A. I. M. E. Officers	2-24	72
Training of Petroleum Engineers	2-24	72
A. P. I. may take over A. I. M. E. Refining Section	3-3	136
Western Petroleum Refiners Association Convention	3-10	42
Lovejoy, J. M.—A. I. M. E. Petroleum Division	3-17	30
N. P. M. A. transferred to I. O. M. A.	3-17	34
American Association of Petroleum Geologists Meeting	3-31	32
Lockwood, C. D.—Plant Operators Hold Two Meetings	3-31	121
American Chemical Society Meeting	4-14	34
Dameron, J. H.—Natural Gas Association Meets in Dallas	4-14	33
Ziegenhain, W. T.—Mid-Continent Section A. S. M. E.	4-14	149
American Chemical Society Meeting	4-21	39
American Oil Men's Association Meeting	4-21	40
Natural Gas Association, Southwestern Division, Meeting	4-21	41
National Petroleum Association Semiannual Meeting	5-5	33
Natural Gas Association of America Meeting	5-12	38
Association of Natural Gasoline Manufacturers Meeting	5-26	40
Fanning, L. M.—Gas Conservation Committee Meets	6-2	29

CRACKING AND CRACKED GASOLINE

Cracking (see Legislation).		
Willson, C. O.—Secure Cracking in Reducing Still	1-27	32
Corona Discharge in Cracking	2-10	80
Willson, C. O.—New Cracking Process in Operation	2-17	158
Egloff, Gustav, and Jacque C. Morrell—Corrosion in Cracking Equipment	2-17	140
Fanning, L. M.—Cracking Process Improves	3-17	132
Holmes-Manley Cracking Development	3-17	132
Morrell, J. C., and Gustav Egloff—Economic Aspect of Desulphurization	3-17	150
Fanning, L. M.—Cheap Crude's Effect on Cracking	3-31	36
Fanning, L. M.—Cracking Operations Curtailed	4-7	167
Explains Curtailment of Cracking Units	5-12	157
Sachanen, A. and M. Tilitscheyew—Factors in Liquid Phase Cracking	6-23	144

ECONOMIC, FINANCE, ACCOUNTING, VALUATION, ADMINISTRATION

Financial Review—Weekly.		
Security Prices—Weekly.

Permian Basin	3-24	42
New Producing Area in Southwest Texas	3-24	57
Ventura Avenue Field	3-31	35

18 REASONS *for Using*

ECLIPSE SAVE-A-LINE

THE large pipe line and gas companies are notoriously shrewd buyers—they are influenced solely by FACTS—the facts of actual performance.

Therefore, when considering and testing Pipe Coatings, the selection of ECLIPSE "Save-A-Line" by the following 18 large pipe line and gas companies, is disinterested evidence of its superiority in endurance and protection:—

Associated Pipe Line Co.
California Petroleum Co.
Coast Counties Gas & Electric Co.
Community Natural Gas Co.
Empire Natural Gas Co.
Gulf Pipe Line Co.
Hall & Briscoe
Hope Engineering & Supply Co.
Houston Gulf Gas Co.
Humble Pipe Line Co.
Indian Territory Illuminating Oil & Gas Co.
Lone Star Gas Co.
Municipal Gas Co.
New York State Gas & Electric Corp.
Provincial Natural Gas Co.
Public Service Electric & Gas Co.
Shell Co. of California
Wilmington Gas Co.

They are now using it regularly. The total of their orders last year ran into hundreds of carloads.

This tough, elastic, non-cracking, non-peeling, heavy filmed coating, ECLIPSE "Save-A-Line," requires no heating and can be applied just as it comes from the package. This eliminates fire hazard and also possible injury to the workmen who handle hot materials. Covers approximately 140 square feet to the gallon.

Let us figure on your requirements. We will be glad to send you sample and quote you prices. Write us.

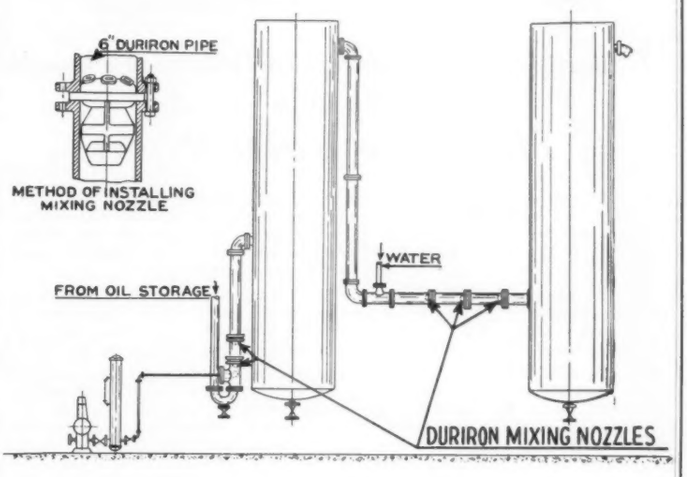
DOWN! Goes Treating Cost

Great savings in time, power and chemicals are effected when Duriron mixing nozzles are used for continuous treating of light oils with sulphuric acid or other treating agents.



The salient features of the Duriron nozzle are complete immunity from corrosion and erosion; an intimate mixture of liquids of different specific gravities; elimination of excessive back pressure on the pumping system and an accurate measurement of treating agents.

Full information on adapting this economical and efficient nozzle to your plant will be sent on request. Write TODAY.

Look at These Nozzle Prices

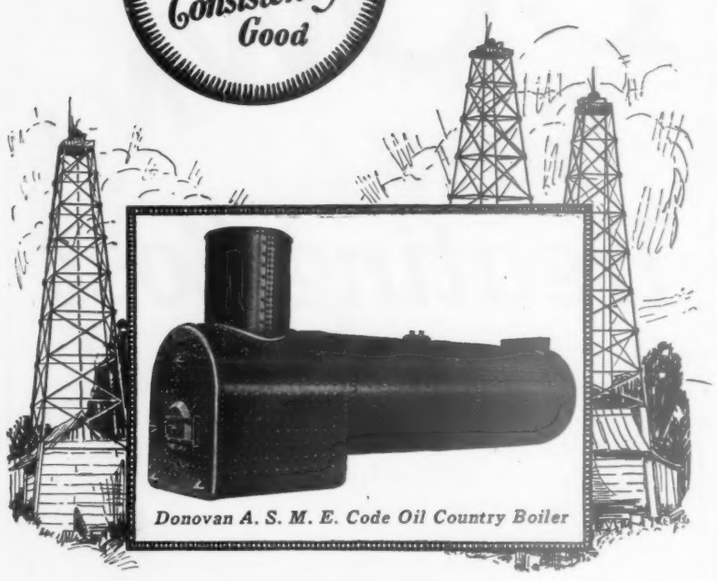
Donovan Boilers are Consistently Good



Donovan A. S. M. E. Code Oil Country Boiler

Chosen for Their Ability to Deliver the Goods

Because

They Are Built Right

In the early days, the domes on oil country boilers were attached in much the same manner as when the domes are placed back on the shells; nothing held the dome in place but the rivets in the flange. This caused cracking in the heel of the flange because the domes could move up and down under pressure.

To eliminate this, the A. S. M. E. Code limited the diameter of the dome to 60% of the diameter of the shell when the dome is placed on the shell. The small dome, resulting from this, made it very easy to pull over the water and the boiler could not do its work.

The DONOVAN boiler has a large dome over the firebox which is thoroughly staybolted to the crown sheet. The dome cannot move, hence no dome flange cracks are encountered. In our design, the dome can be as large as needed. There is no limitation to its size. This permits a large dome, resulting in a maximum supply of dry steam at all times and making it difficult to pull the water over. The steam is dry, because it comes off right over the crown sheet.

This design was developed by practical men and will do the work demanded of an oil country boiler. DONOVAN has never built a boiler with the dome any place but over the firebox where experience shows it should be. DONOVAN was the first to build A. S. M. E. Code boilers of this design.

This is another reason why you should buy DONOVANS when you need boilers.

NO-OX-ID
IRON + OX = RUST
TRADE MARK
The Original Rust Preventive

Again!

The Only
Protective Coating
That Has Held Up

Report from a Dearborn Service Man in Texas:

"The ——— Pipe Line Company 'phoned me this morning that they were sending in an order for three drums of NO-OX-ID "A" Special and 1100 yards of NO-OX-ID-IZED Wrapper,—this material to be used in treating a particularly bad spot on one of their lines near Port Arthur, Texas, where all paints and asphaltic coatings have failed—NO-OX-ID and Wrapper being the only protective coating that has held up, the small stretch of line which we treated with NO-OX-ID and Wrapper last year as a demonstration being still in fine condition as compared to paint and asphaltic coatings. The soil over this line is highly impregnated with salt water, refinery drainage and sludge acid refuse—so in all it is quite a severe test."

Let us run a demonstration for you if you are not already fully convinced that NO-OX-ID and NO-OX-ID-IZed Wrapper are the most effective of all protective coatings.

Make Our Branch Shops and Yards at Borger, Iraan, Crane and Rankin Your West Texas Headquarters for:

CASING AND LINE PIPE
PIPE THREADING
COUPLINGS AND FITTINGS
NIPPLE AND OTHER EMERGENCY WORK, (24 hour service).

The better service of our branches to West Texas operators is proving unusually profitable to our customers, and is rapidly making them the most popular pipe shops and yards in West Texas.

Our branches are completely stocked with all sizes of casing and line pipe for immediate shipment, and our shops are modernly equipped to furnish speedy and efficient service on pipe threading for all sizes of pipe, as well as nipple and emergency work. Couplings and fittings of all kinds carried in stock.

Thousands of Wells Have Accurate Automatic Vacuum Regulation

ACCURATE, automatic control of well vacuum is being obtained daily on thousands of wells with Davis Improved Casinghead Gas Regulators. The list of users includes practically every active oil company.

Simple advanced design—that's the reason for the accuracy of these regulators. The valve body is separated from the diaphragm chamber allowing an equalized control pressure to be taken from the line a short distance from the valve.

Protection against weather in the most exposed locations, ease of maintenance and repair, and simple installation are other features of the design which have made its choice almost universal. Ask your neighbors about Davis performance, or write for catalog giving full details.

Years of Metal Packing Experience

Years of Experience Garlock metal packings are mechanically right from the standpoint of design and service. Their efficiency is the result of *twenty-five years of manufacturing experience* coupled with careful surveys made by our engineers to determine the proper designs for work against high temperatures and pressures existing in modern power units.

Research Department Our Research Department gives special study to the mechanical details of the packings; we also maintain chemical and physical laboratories to determine different composition of alloyed metals in reference to their hardness and wearing qualities.

Use of Metal Packings The use of metal packing is not limited. It will give superior and economical service in certain classes of mechanical equipment when used on valve stems and steam, air, gas, and ammonia piston rods.

Consultation Service As a part of our metal packing service, we maintain a Corps of Metal Packing Engineers who are at the call of our customers for consultation on special or difficult metal packing problems.

Garlock Metal Packings

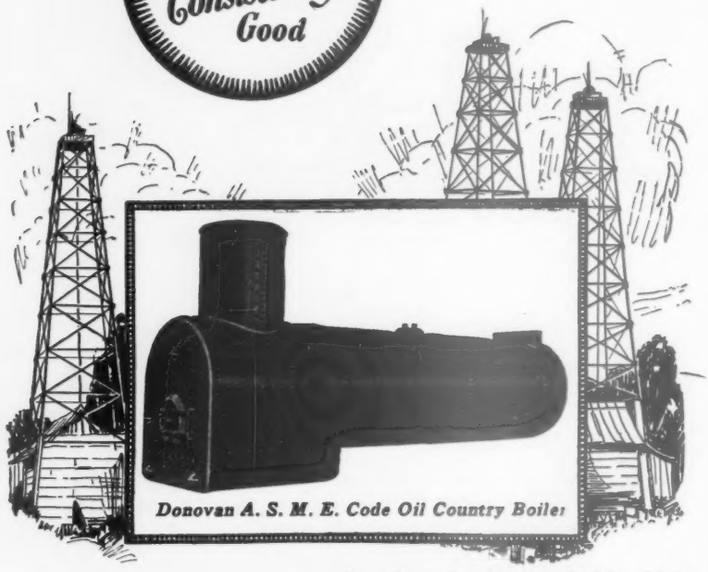
Donovan Boilers are Consistently Good



Donovan A. S. M. E. Code Oil Country Boiler

SWORN BY — NOT AT!

In the Tonkawa field, Oklahoma, is a battery of old DONOVANS. They have been on that job over four years, day in and day out.

The operator has this to say about them:

"These DONOVANS are dandy steamers and stand up under hard work to a surprising degree. In spite of bad water, we have had entire satisfaction and I like them fine."

Each DONOVAN is designed and built to deliver the goods and to minimize the effects of unfavorable operating conditions. Give them half a chance and you will be repaid many times over in long and faithful service.

These are boilers to swear by—not at.

You can prove the value of Page-Armco Welding Wire and Electrodes for yourself and your own job.

Careful tests will show you that this carefully processed and thoroughly shop tested wire gives better welding results. What is more, it costs less to use when you figure complete welding costs of time and material. Workmen will tell you Page-Armco Welding Wire is easier to use. It will pay you to investigate.
